# SOFT WASH ROOF CLEANING

1-888-31-POWER

**DURING**

**AFTER**

The black stains on most roofs today, is a mold and algae called Gloeocapsa Magma. The roofing manufacturers reformulated asphalt shingles in the late 1980's, removing some of its Asphalt & replacing it with crushed limestone. This acts as a filler to add weight to the shingle. The limestone is the food source for the algae. In most cases on a North or East facing roof is where the black mold and algae grows. This provides the ideal moist environment for algae growth. The blackness is a protective barrier that the algae forms to shield itself from the sun's UV rays.

Here at Precision Power Wash, our soft wash roof cleaning process is specially designed to eradicate the mold and algae that has contaminated and eats away the roof shingles.
